	<p>Document 1: JP 2001-350736 A (Hitachi, Ltd.), 21 December 2001, entire text, all drawings</p> <p>Document 2: JP 8-329025 A (Toshiba Corp.), 13 December 1996, entire text, all drawings</p> <p>Claims 1 to 7</p> <p>Document 1 discloses a system for connecting a remote system and a plurality of online systems via a communication control device, wherein the connection between the remote system and an online system is switched when a task is transferred from one online system to another online system. Meanwhile, document 2 discloses a configuration wherein a process that is being executed by a given processor is transferred to another processor in order to continue the execution of the process. Such being the case, it would have been easy for a person skilled in the art to conceive of implementing the transfer of a task by transferring a process in the system disclosed in document 1. Furthermore, a person skilled in the art could arbitrarily select the communication protocol, as necessary, and thus it cannot be considered to be especially difficult to limit the transport level protocol.</p>
